

Simple Hatches

Starter access door with Graupner latch 4260.12 , it can be molded or shaped into your installation very easily. If I used a magnet, I would need a tool to open it each time. This heli is user friendly!

The new landing light kit... flush mounts on the inside.

A keyhole shaped hole is cut in the floor and the light fixture can be gooped into place after the paint work is complete. Here the light is tacked in for fitting and is in the fully retracted position.

I will use a micro servo up front to control this light, a servo mounted micro switch will take of the light switching on only in the down position.

This helicopter is just about done and ready to paint... She has hours of flying her now and everything is just as it was off the bench. The inside is still clean and after 3 models and hours upon hours of flight testing, the mechanics show no wear whatsoever.

off to the paint booth!

Graupner USA

Innovation in modeling

This is what I am going for....Hot Tamele' I will spice up the color using porsche red.
